

Freeze Prevention Procedures for Outdoor PVB's

PVB Freeze Prevention Procedures:

- 1. Go to control clock and start manual cycle.
- 2. Close Valve "C".
- 3. Position Valves "A" and "B" to the 45 degree position.
- 4. Using a flat screwdriver, turn the Test Ports to the 45 degree position.
- 5. Open Drain, allow water to completely drain into bucket. Leave Drain open.
- 6. After control clock has completed manual cycle, turn controller to off position.

Only a complete winterization by Lipetzky's Irrigation can prevent your entire system from freeze damage.
